SECTION A

INTRODUCTION TO OPENTYPE®

WHAT IS OPENTYPE?

OpenType® is a cross-platform font file format developed jointly by Adobe and Microsoft. The two main benefits of the OpenType format are its cross-platform compatibility (the same font file works on Macintosh and Windows computers), and its ability to support widely expanded character sets and layout features, which provide rich linguistic support and advanced typographic control.

OpenType fonts can be installed and used alongside PostScript® Type 1 and TrueType fonts.

The range of supported layout features may differ in the various FontFont OpenType packages, therefore each OpenType package will be accompanied by this FF Info Guide listing the layout features supported by this specific font package.

You'll find a glossary of all available OpenType layout features in Section B of the general FF OpenType User Guide.

Please see the FontFont OpenType® User Guide at http://www.fontfont.com/opentype

ABOUT FF EUREKA MONO LIGHT ITALIC

All of the characters of FF Eureka Mono share the same width, which makes it suitable for tabular setting—when the layout benefits from vertical alignment of the characters. Typical examples would be spreadsheets, computer code, or use in correspondence. Taking into account all of the possibilities of type usage today, FF Eureka Mono was also designed with on-screen reading in mind. All three typefaces—FF Eureka, FF Eureka Sans, and FF Eureka Mono—share the same basic letter skeleton, and combine easily with one another in text.

ABOUT PETER BIL'AK

Peter Bilak was born in Czechoslovakia and now works in The Netherlands, in the field of graphic and type design. In 1999 he started his type foundry Typotheque. In 2000, he co-founded DOT DOT DOT magazine. He teaches typography part-time at the postgraduate course Type & Media at the Royal Academy of Arts in The Hague. In 2004, together with a dancer Lukas Timulak, he directed a modern dance piece inspired by typography.
